

Ink•Thrift test comparison

The test image has an embedded ICC source profile of Adobe RGB 1998. We opened it in Photoshop and we did not convert it to another color space.

We printed the Ink•Thrift test image using an Epson 4900 printer and the Epson recommended workflow for Epson Premium Photo Paper Glossy.

We recommend that you do the same for a comparison to see glossiness, dMax and color strength.

We produced a generic ICC profile to print our sample, but we recommend that you produce ICC profiles for all your media to take advantage of the greater color chroma provided for by the Ink•Thrift dye inks.

Thanks and Happy Printing!
