

ConeColor PRO test comparison

The test image has an embedded ICC source profile of Adobe RGB 1998. We opened it in Photoshop and we did not convert it to another color space.

For ConeColor PRO K3, we printed the test image using an Epson 7800 printer and our recommended workflow on both Epson Premium Presentation Matte paper and Epson Premium Presentation Glossy paper. We did the same for ConeColor PRO K3 Vivid using an Epson 3880. For ConeColor HDR we used an Epson 4900.

We recommend that you do the same for a comparison to see glossiness, dMax and color strength using the Epson recommended workflow.

Thanks and Happy Printing!
